

# Scalable Metadata Indexing For Distributed Research Data

Todd Trann  
Technical Lead

Canadian Research Software Conference  
May 29, 2019

# WHAT IS RADIAM?

- ▶ Radiam is a centralized searchable metadata index for the distributed data of a research project during active data collection and processing
- ▶ Built on top of an existing open source, scalable search engine (Elasticsearch)
- ▶ Offers up a secure API that can be used by various plugins and agents to update and query the index
- ▶ Enables rich, standards-based metadata application near the point of data collection
- ▶ Read more: <https://www.radium.ca>

# PROJECT BACKGROUND

- ▶ The University of Saskatchewan and Simon Fraser University, with the support of Compute Canada/WestGrid and CARL/Portage proposed the project in spring of 2018
- ▶ CANARIE's Research Software Program provides 18 months of project funding (Oct 2018 - Mar 2020)
- ▶ On completion, Radium will be open source and licensed without restrictions so that it can be used for future projects

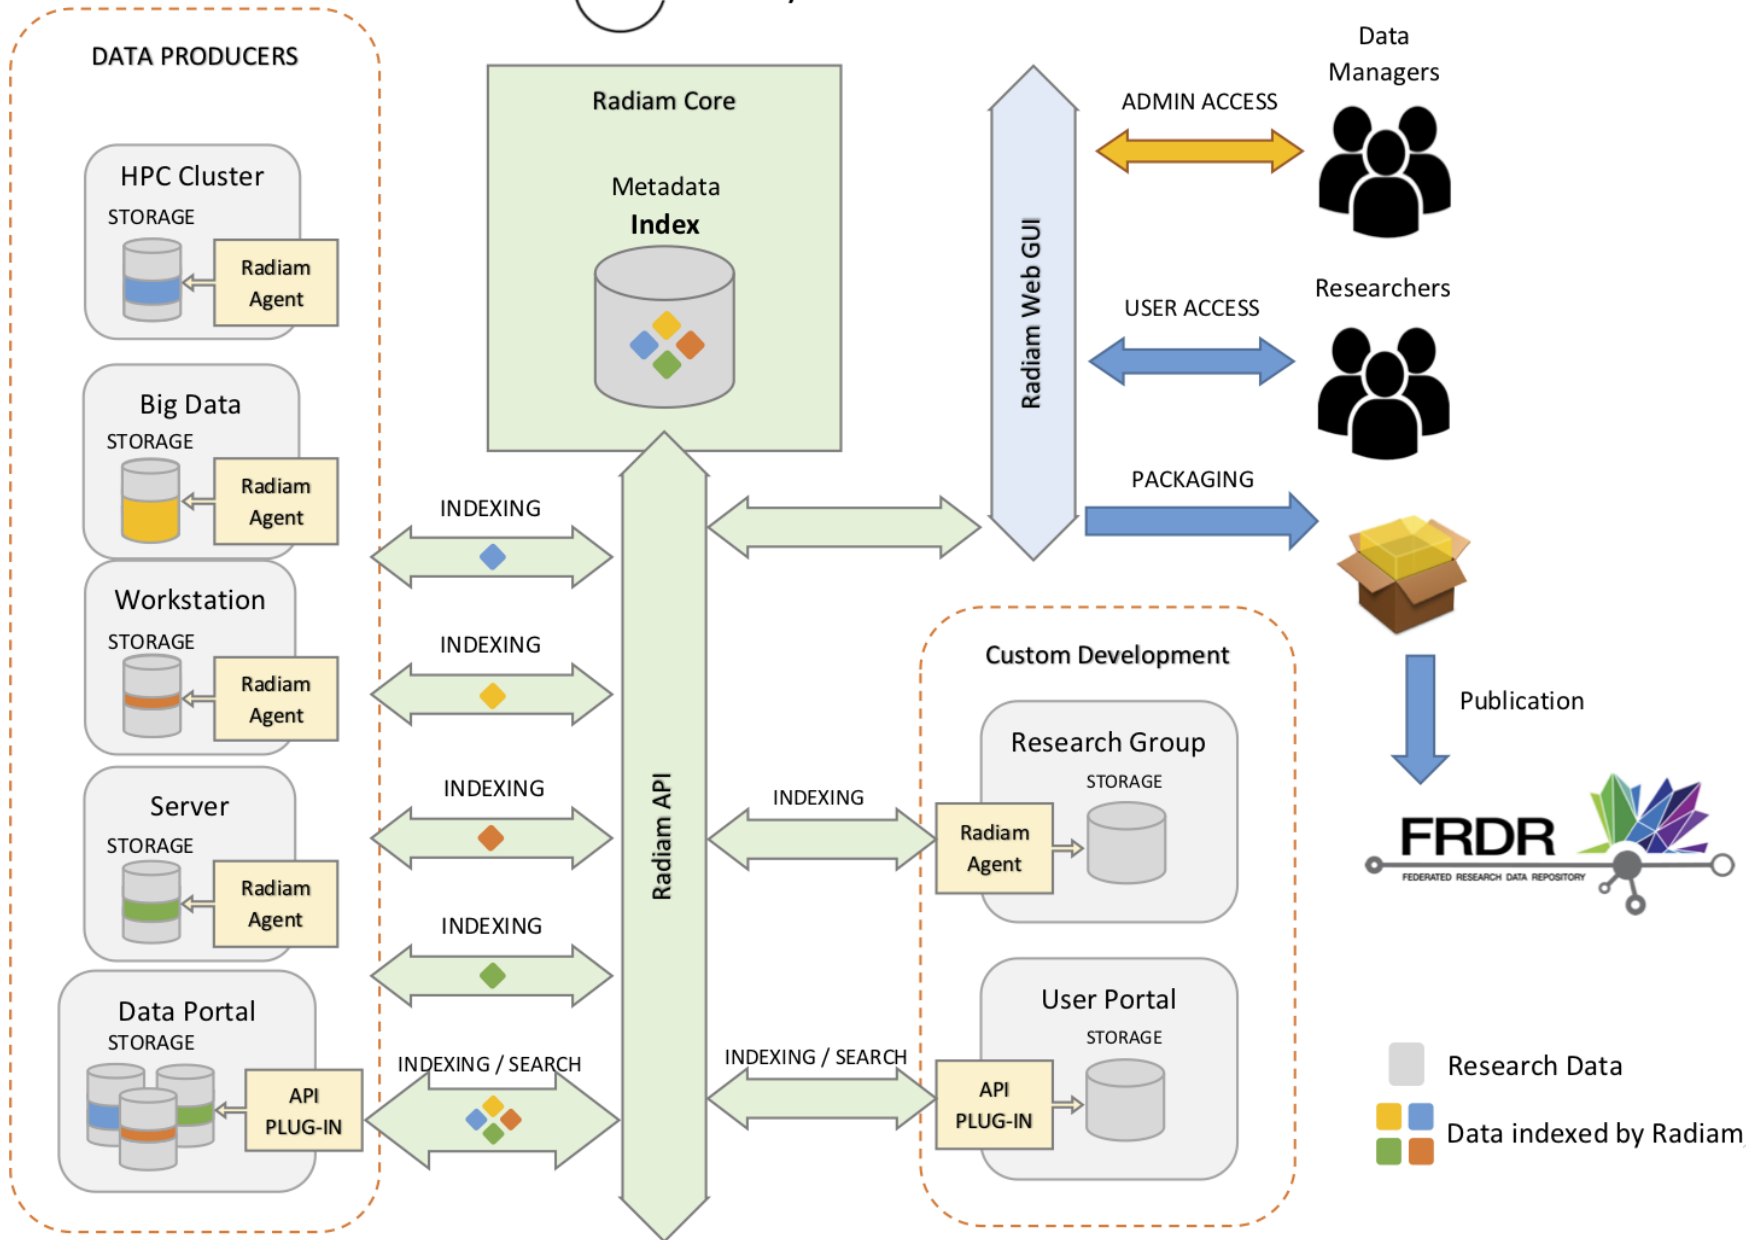

# FEATURES

- ▶ **Index:** crawl locations for data, submit metadata to the search index
- ▶ **Annotate:** augment collected metadata with additional domain-specific metadata
- ▶ **Search:** retrieve indexed metadata, including the location and access method if known

# FEATURES

- ▶ **Integrate:** work with existing research tools or workflows to obtain additional metadata
- ▶ **Connect:** allow researchers and data managers to see all datasets within one instance of Radiam
- ▶ **Package:** assemble metadata for a dataset to assist with publication to a repository

# Radium System Architecture

# WHAT'S WORKING NOW

## ▶ API

- ▶ All REST endpoints to support web and agent functions
- ▶ API specification and documentation

## ▶ Web Interface

- ▶ Create account, log in, reset password
- ▶ Manage users, groups and projects
- ▶ View the indexed metadata

## ▶ Agent

- ▶ Built and running on Windows, Mac, Linux
- ▶ Index data for multiple projects with one agent

## ▶ Portal Plugins

- ▶ HubZero: authentication, search, view the indexed metadata

# WEB INTERFACE

The screenshot displays the Radium web interface. At the top, a blue header bar contains the Radium logo on the left and the text 'ADMIN' with refresh and user icons on the right. A left sidebar lists navigation items: Dashboard, Users, Groups, User Roles, Group Membership, Location Types, Locations, Projects, Data Collection Statuses, Data Collection Methods, Data Restriction Levels, Data Sensitivity Levels, View Grants, and User Agents. The main content area features three sections: 1. 'Welcome to Radium' with a sub-header and a message to browse project data. 2. 'Install Agent' with a sub-header and instructions to download the agent for Windows, Mac, or Linux. 3. 'Recently Added Files' with a table listing Project 1, Project 2, and Project 3, each with a 'SHOW ALL FILES' button and a dropdown arrow.

Recently Added Files	
Project 1	SHOW ALL FILES ▾
Project 2	SHOW ALL FILES ▾
Project 3	SHOW ALL FILES ▾

# API

## Radium API

- datacollectionmethod
- datacollectionstatus
- distributionrestriction
- groupmembers
- grouproles
- groupviewgrants
- locations
- locationtypes
- password\_reset
- projectdatacollectionmethod
- projects
- projectsensitivity
- projectstatistics
- researchgroups
- sensitivitylevel
- token
- useragents
- users

## Radium API

Radium API documentation

### datacollectionmethod

#### list

**GET** `/api/datacollectionmethod/` INTERACT

API endpoint that allows the editing of data collection methods.

##### Query Parameters

The following parameters should be included as part of a URL query string.

Parameter	Description
<code>page</code>	A page number within the paginated result set.
<code>label</code>	

#### create

**POST** `/api/datacollectionmethod/` INTERACT

API endpoint that allows the editing of data collection methods.

##### Request Body

The request body should be a `"application/json"` encoded object, containing the following items.

Parameter	Description
<code>label</code> <span>required</span>	Data collection method label

#### read

**GET** `/api/datacollectionmethod/{id}/` INTERACT

API endpoint that allows the editing of data collection methods.

##### Path Parameters

```
# Install the command line client
$ pip install coreapi-cli

# Load the schema document
$ coreapi get http://localhost:8100/api/docs/

# Interact with the API endpoint
$ coreapi action datacollectionmethod list -p page=... -p label=...

# Load the schema document
$ coreapi get http://localhost:8100/api/docs/

# Interact with the API endpoint
$ coreapi action datacollectionmethod create -p label=...

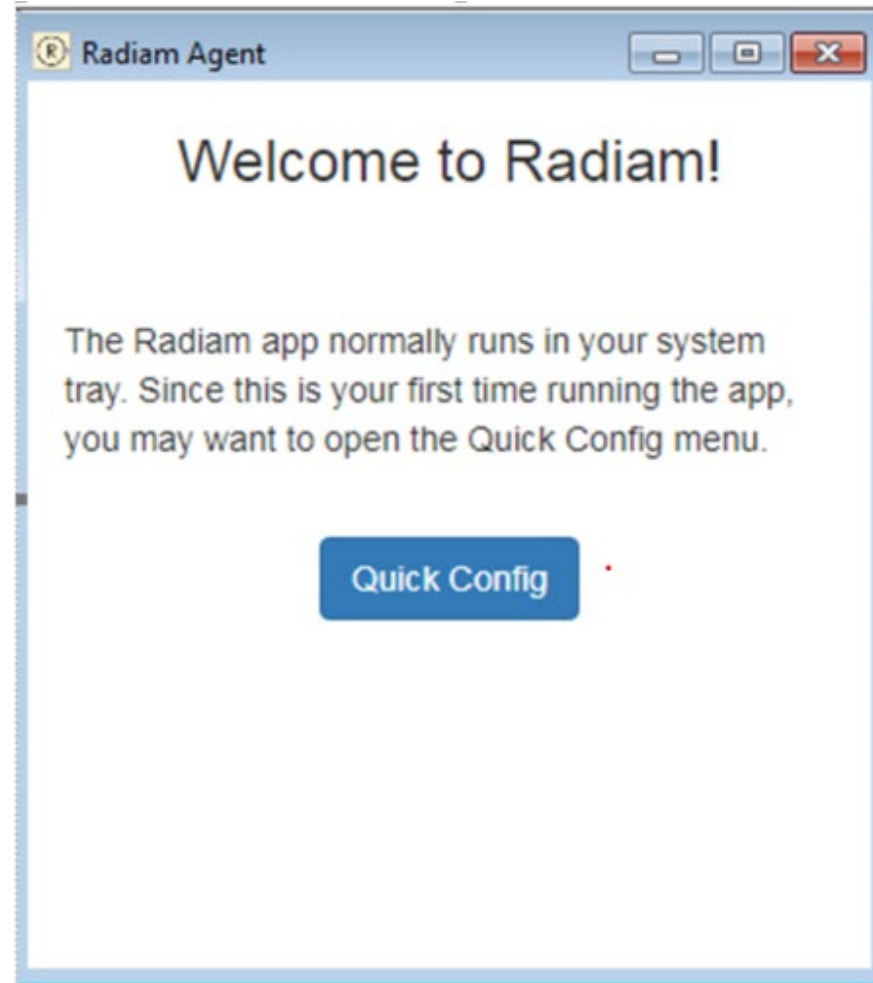

# Load the schema document
$ coreapi get http://localhost:8100/api/docs/

# Interact with the API endpoint
$ coreapi action datacollectionmethod read -p id=... -p label=...
```

# AGENT

Built and running on 3 platforms

# TIMELINE

# FUTURE

- ▶ Source code to all components of Radium are being published under the MIT open source license
- ▶ The open architecture of Radium allows its components to be upgraded or rewritten to keep up with integration points such as data portals
- ▶ API specification and developer documentation together will allow research groups to write custom applications that work with Radium
- ▶ Published on the CANARIE Research Software Portal:  
<https://science.canarie.ca>

# PROJECT MEMBERS

- ▶ PI: Kevin Schneider, University of Saskatchewan
  - ▶ [Kevin.Schneider@usask.ca](mailto:Kevin.Schneider@usask.ca)
- ▶ Co-PI: Dugan O'Neil, Simon Fraser University
  - ▶ [doneil@sfu.ca](mailto:doneil@sfu.ca)
- ▶ Project Lead: Jason Hlady, University of Saskatchewan
  - ▶ [Jason.hlady@usask.ca](mailto:Jason.hlady@usask.ca)
- ▶ Project Team:
  - ▶ CARL/Portage: Lee Wilson
  - ▶ SFU: Alex Garnett, Yang Zhou, Jonathan Loewen
  - ▶ USask: Joel Farthing, Todd Trann, Mike Winter, Adam McKenzie, Rama Periasamy, Sergiy Stepanenko
